Mission

Our mission is to provide necessary engineering, design and inspection of all municipal improvements including streets, storm drains, sanitary sewer, and water systems; to provide support services on engineering matters to other departments.

The Engineering Department is responsible for:

- Site Plan and Storm Water Management Plan Reviews
- Permitting of Work within the Right of Way
- Reviewing and Approving Plats
- Design, Bidding, and Construction Management for Roadway Maintenance Projects
- [Floodplain Management](#)
- [MS4 Storm Water Program Administration](#)
- [Street Signs, Street Lights, and Traffic Signals](#)
- Processing Right of Way Encroachment Applications
- Compiling and Updating the City's 5 Year Capital Improvements Plan
- Implementing the City's Asset Management Program
- Managing the City's GIS

Current Project Update:

Phases 1 and 2 are currently under construction. The new culverts have been installed near the intersection of 10th St SW/24th Ave SW on the east side of the mall, near Best Buy and Wings and Rings. The roadway remains open to vehicle traffic, as work is being completed on one side at a time and a bypass road has been built for traffic. Prep work is being done for the new curb and gutter.

Phase 3 is currently under construction, with a section of 22nd Ave SW, just north of McDonald's being closed. McDonald's will remain open during construction. Access to the restaurant and other adjacent properties will be available on 24th Ave SW. Traffic will detour off of 22nd Ave SW at 15th St SW.

Prep work will begin for the next Phases with the closure of a section of the Mall Ring Road west of Target on 5/27. The intersections at 24th Ave and 26th Ave will remain open at this time.

Phasing information can be viewed under Project Details.

Project Results

Storm Sewer District 121 - Puppy Dog Coulee is a project to replace the aging storm sewer culvert system which conveys storm water from west of Minot, across 16th St SW, through the area of Dakota Square Mall, and to the Highway 2 & 52 ditch. The current pair of 84" corrugated metal pipe culverts were installed during the mall's construction in 1980 and have reach the end of their life. They are now in very poor condition, showing severe corrosion and section loss, and are in need of replacement. In total, nearly 1,600 feet need to be replaced

In addition to the age and condition of the current pipes, they are also not properly sized to handle the amount of storm water in Puppy Dog Coulee. The Puppy Dog Coulee drainage basin is 9,500 acres, extending miles southwest of Minot. During large rain events, storm water overtops 16th Street SW, damages property in the Green Acres neighborhood, and breaks out on to neighboring commercial properties.
